

## Disaster Recovery Plans – How to Make Sure Your Data Isn't Lost

### Assessing Your Risk

As physician offices use increasingly more technology, there is a growing risk that systems failures can create the loss of critical medical and financial information and even put patient lives at risk. In order to make sure that your practice minimizes the chance of this type of situation arising, you need a plan to proactively protect the data that helps you care for your patients and bill for your services. Information from the following systems should typically be stored in multiple locations to ensure that information isn't lost:
